

Anchor Tag

- The **anchor tag** (`<a>`) is used to create hyperlinks, which allow users to navigate from one webpage to another or to different sections within the same webpage.

- It can also be used to link to other types of resources, such as images, files, or email addresses.

Basic Syntax

```
<a href="URL">Link Text</a>
```

- **href**: The most important attribute of the anchor tag. It specifies the destination URL of the link.

- **Link Text**: The clickable text or content that the user interacts with.

Attributes of the Anchor Tag

- **href (Hypertext Reference)**: Specifies the URL to which the link points.

- **target**: Specifies where to open the linked document. Common values include:

- **_blank**: Opens the link in a new tab or window.
- **_self** (default): Opens the link in the same tab or window.

- **title**: Provides additional information when the user hovers over the link.
